

PROJECT TITLE

DESIGN AND IMPLEMENTATION OF A WEBSITE FOR UNIVERSITIES TO AID IN ALL ACTIVITIES WITH THE AID OF AUGMENTED REALITY

Design and Implementation of a website for universities to aid in all activities with the aid of Augmented Reality

According to a recent survey conducted on a group of college students , A major problem faced by students is that they are unable to utilize all the amenities and opportunities provided by the university.

The motive of this application is to track, analyze, evaluate the achievements and progress of students, teachers inside a university. The application can be operated by everyone inside the university. The website incorporates an AR chatbot which assist newcomers as well as the existing students in understanding the university better. The chatbot will come up with answers to all the relevant questions associated to the university, subject or department. The website features another AR mascot which guides the users through the university giving precise and detailed directions using the power of Augmented Reality. The website will have a dedicated area where students and teachers can showcase their achievements. The teachers will be able to provide updates , share grades, etc to the students on a single platform.

The website aims to be an all in one solution for a university.
